Why?

Natural gas as a transportation fuel (CNG, LNG, renewable CNG) has helped thousands of organizations in the United States to reduce fuel costs and increase corporate sustainability. With the IEA recently projecting natural gas will become the most-used fuel in the US by 2030, and Navigant projecting that 40% of all natural gas stations opened in the next two years will cut their ribbons in the United States, this trend is here to stay.

Improving natural gas market development & fueling infrastructure is the key in aiding widespread adoption for fleets; unique parts & services partnerships and the incorporation of technology from similar industries are helping a variety of oil & gas companies share risk *and* reward. For example, CenterPoint Energy and Kwik Trip have recently embarked on a collaborative effort to improve infrastructure availability; learn key markets that are poised for increased investment and development. Come discover how your organization can partner and prosper. Natural gas will be a big part of America's transportation future, so make sure you're educated!

How?

Don't wait to get an idea of how natural gas partnerships are working to make natural gas the standard for transport in North America [Download Brochure](#) here to see an overview of the event. If you'd like to register, make sure to do so using my special discount code **EMERALD200** and get \$200 off the price of admission.
